

# A Revolutionary Networking and Security Platform that Always Connects and Protects Your Business

Is your networking and security evolving as fast as threats are? Our all-in-one, cloud-first networking and security platform continuously adapts to the latest threats, empowering your business to thrive.

Legacy networking and security is broken. Threat actors are constantly evolving their approaches and finding new ways to extort, breach and take down businesses. Networking and security that relies on multiple products and tools can't keep pace, providing ample opportunity for threat actors to infiltrate every business. Unfortunately, 60% of small and medium-sized businesses (SMBs) go out of business within six months of a cyber incident.

To thrive today and in the future every business needs the powerful networking and security technologies that government and large enterprises use to stay protected, tailored to their unique needs at an affordable price.

## Introducing the Secure Global Network™ (SGN) Cloud Platform

The SGN consolidates multiple networking and security products into an all-in-one, easy to manage platform that brings world-class technology to every business. As a cloud-first platform, it rapidly adapts to new threats, enables work from everywhere, and is vigilantly managed by a team of networking and security experts.

The SGN eliminates expensive hardware, unnecessary complexity, and reliance on multiple, narrow, and costly products and tools. It helps make you invisible to threat actors and stop them before harm can be done.

**With the SGN, you are Always Connected. Always Protected.™**

### What does this mean for you?

Simply put, it means you'll be Always Connected. Always Protected.™

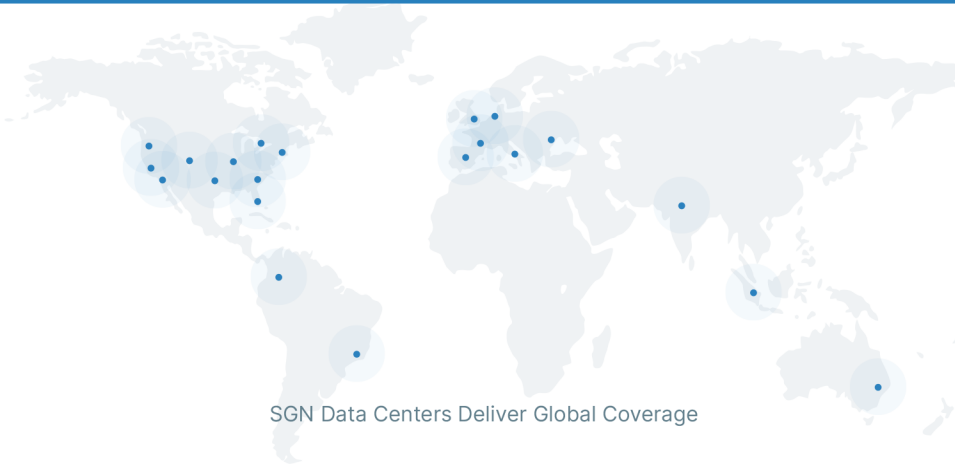

You'll be backed by an industry leading solution that proactively prevents, detects, and responds to threats.

You'll have technology that enables your success instead of fueling frustrations.

You'll gain confidence knowing that your employees, no matter where they work, have safe, secure, and reliable connections.

You'll offload your worries, knowing that you're in a protective bubble that helps make you invisible to threat actors.

**By working with us, your business will thrive.**

SGN Data Centers Deliver Global Coverage

# How do we do it?

Our cloud-first, all-in-one platform consolidates several networking and security products for the first time.

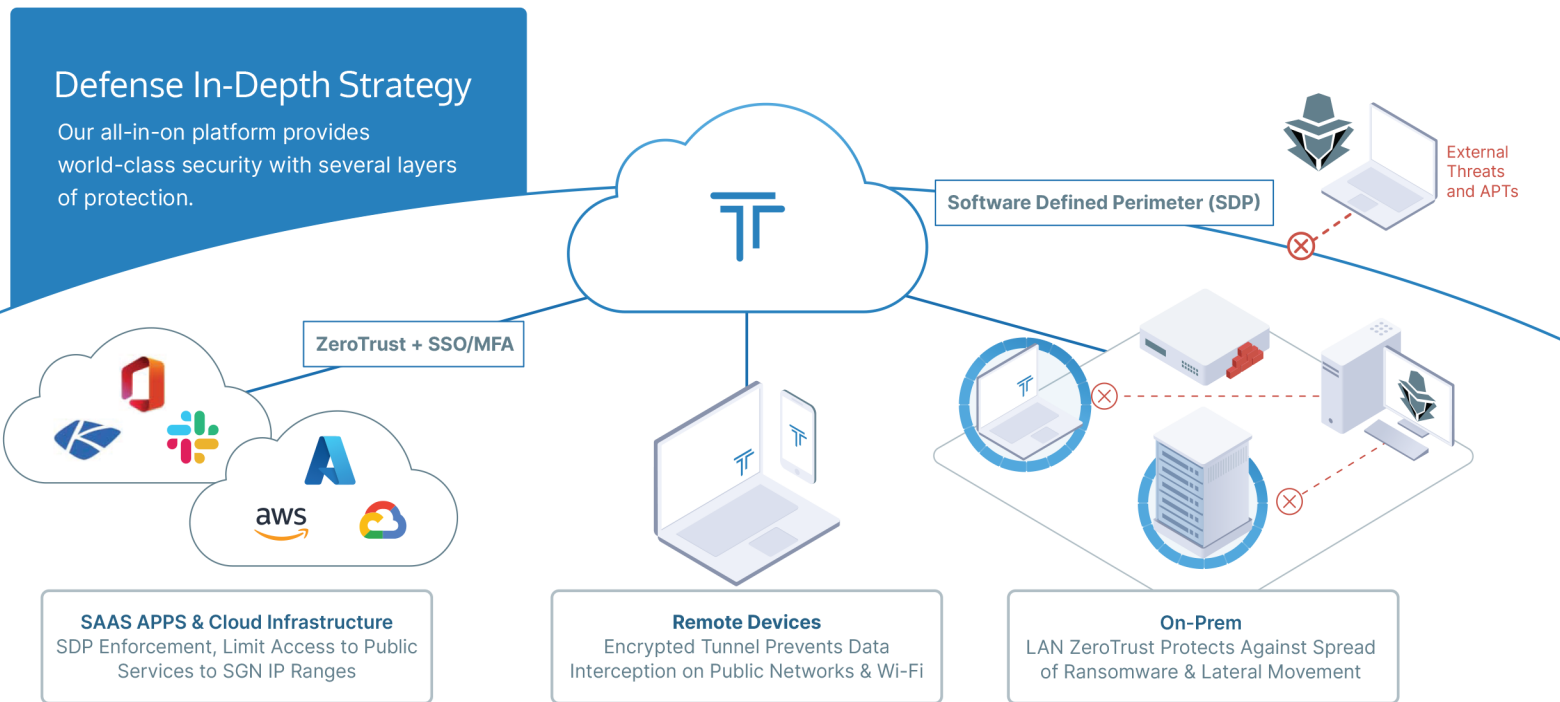

This enables us to provide every business with:

- ✓ ZeroTrust architectures that meet the White House's Executive Order to Improve the Nation's Cybersecurity
- ✓ Safe, secure and reliable remote connections
- ✓ Advanced threat prevention and detection
- ✓ Streamlined identification and management of compliance requirements

The principles of ZeroTrust our platform is built on:

- 1 Assume every network is hostile
- 2 Create an invisible network to operate in
- 3 Segment and isolate users and applications
- 4 Deemphasize the physical network and perimeter, implement security everywhere

Contact us today to learn how we can help you become Always Connected. Always Protected.™
