Governance, Risk and Compliance

The number of regulations at a federal, state, and global level has grown in the past years. Data breach, data protection, and privacy laws are starting to apply to all businesses, not just big corporations. Todyl's GRC module can help identify the regulations organizations may be in scope for, as well as provide helpful guidance towards improving the organization's overall security posture.

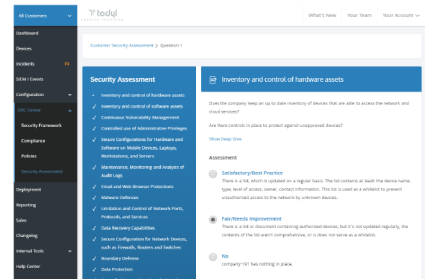

Understanding Compliance Requirements

There are a handful of major regulations that organizations are typically familiar with such as HIPAA, GDPR and, PCI-DSS - but what about the hundreds of federal, state and local regulations an organization may be in scope for? Todyl's GRC module identifies the regulations for various types of companies and can help create roadmaps towards achieving compliance.

Security Assessments

Todyl's Security Assessment can help establish a baseline understanding of an organization's current security posture, identify weak points or gaps in that posture, as well as track implementation progression of security controls.

Security Frameworks and Unified Policies

Todyl utilizes the National Institute of Standards and Technology (NIST) Cybersecurity Framework to help guide organizations through the implementation of best practice security patterns, while providing best in class baseline policies, which can be tailored to fit the specific needs of each unique organization.

Federal, State, Local Regulations and More

Todyl's GRC component tracks hundreds of constantly changing International, Federal, State, and local regulations, helping organizations to remain compliant in a rapidly changing landscape.

Helping Achieve Compliance, Without Additional Hardware

Todyl's Governance, Risk and Compliance services are provided without the need for additional hardware or costly appliances. These tools are designed to ensure the creation, implementation, and management of a world-class security program in any size organization.
